The Hunter(Hunt the Hunter)

Intro:

Hi, welcome to this video, today I am goanna show you the game that I created using the Godot Engine.

- Godot
 - It's a free open source gaming engine for both 2D and 3D.
 - Its provide a editor to create game and visualize the game.
 - Its very beginner friendly.
 - So basically we start with scene containing node as tree like structure.
 - You can attach the script to any node.

Game Overview:

Now, let's dive into the game I created, titled "**The Hunter (Hunt the Hunter).**"

Storyline:

In "The Hunter (Hunt the Hunter)," you play as a skilled hunter in a mystical forest where you are both the hunter and the hunted. The forest is filled with dangerous creatures, and you must use your wits and skills to survive.

Gameplay Mechanics:

- Movement and Controls
 - Players navigate the forest using standard FPS controls: W, A, S, D for movement, mouse for aiming, and spacebar for jumping.
 - Smooth and responsive controls are essential for evading predators and chasing prey.
 - You can pull out and pull away Gun using E
 - You shoot using the Left mouse button.
- Hunting and Combat
 - The player is equipped with a Gun combat.
 - Stealth is crucial; players must move quietly to avoid alerting creatures.
- Health and Survival
 - The player has a health bar that decreases when attacked by creatures or when falling from heights.

Game Levels:

"The Hunter (Hunt the Hunter)" consists of two challenging levels, each offering a unique environment and set of challenges.

Level 1: The Enchanted Forest:

- **Objective:** Navigate through the dense forest, hunting smaller creatures.
- **Special Features:** Hidden ancient Pillar, dynamic weather that affects visibility and movement.

Level 2: The Dark Woods:

- **Objective:** Face off against larger, more dangerous creatures while finding a way to escape the forest.
- **Special Features:** A night-time setting that increases difficulty, and an antidote to save humanity from the rare disease.
